

IT'S TIME FOR SMART CARGO:
REAL-TIME, IN-TRANSIT VISIBILITY

WHAT VISIBILITY WILL ENABLE YOU TO DO NOW.

Rather than waiting for someone to physically search for your freight to give you an update, placing a sensor directly on your cargo can automatically and in real time provide you information about where it is and what condition it's in.

Cargo Signal provides real-time visibility of your cargo, so you can make decisions to keep your supply chain moving. Customers use our sensors and data to optimize their shipping operations, reduce costs, and improve customer service.

- See exactly where your cargo is with single-use devices that do not require reverse-logistics.
- Identify if your freight is stationary when it shouldn't be.
- Catch your cargo before it gets misrouted.
- Course correct to prevent delays.
- Provide full supply chain transparency to internal and external stakeholders.

DON'T WASTE YOUR TIME TRACKING AND TRACING YOUR SHIPMENTS.

SERVICE LEVELS AVAILIABLE

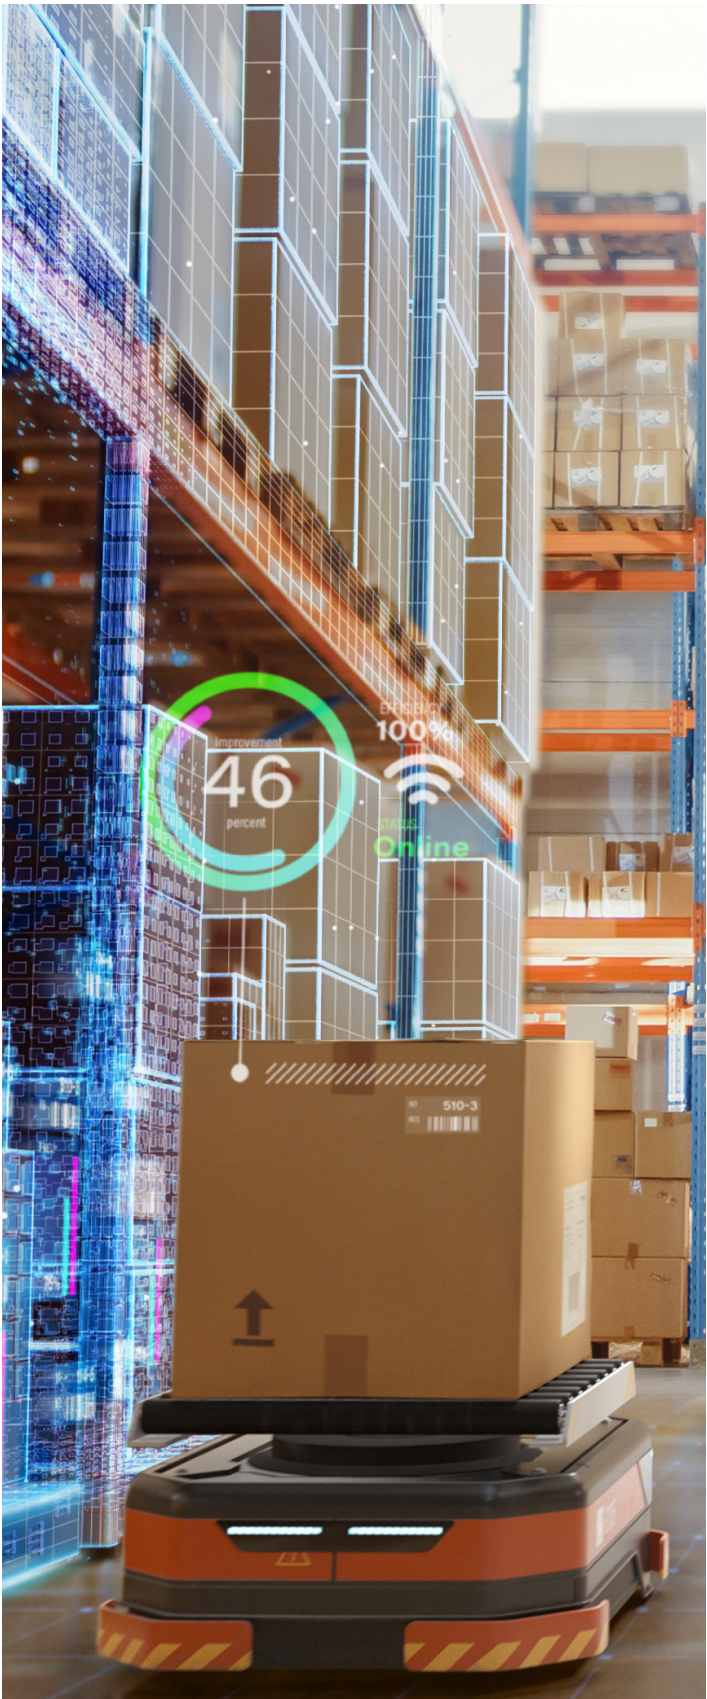

- **Data**
Log on to our platform to view the current location of your cargo.
- **Alerts**
Receive milestone notifications and be alerted of specific shipments that have encountered issues.
- **Command Center**
24/7 live monitoring 365 days a year focused on intervening in instances of route deviation, predicted delay, and stationary cargo.

SENSOR DEVICES

- No reverse logistics
- Pull-and-place application
- 2in x 2in size
- Compliant on all transportation modes

ALERTS YOU CAN CUSTOMIZE

- Arrival
- Departure
- Arrival delay
- Departure delay
- Route deviation
- Stationary
- Predictive delay
- Distance from origin
- Distance from destination

With Cargo Signal you can utilize sensors and custom alerts to enhance the visibility, security, and quality of your global shipments and rely on 24/7/365 Command Center Intervention. Learn more about us at www.cargosignal.com
