

## SOLUTIONS BRIEF

# TRANSPORTATION MANAGER

How many times a day do you get asked for updates on your shipments?

**Say more:** Increase the visibility, accountability, and cost-effectiveness of transporting your shipments with Cargo Signal.

How many times a day do you get asked for updates on your shipments? If you only have milestone data at your disposal, you run the risk sounding redundant or out of the loop. Now, more than ever, Transportation Managers play a key role in supply chain agility. Rather than waiting for someone to physically search for your freight to give you an update, placing an IoT-powered sensor directly on your cargo can automatically provide you the information you and your team need. With Cargo Signal, you will know exactly where your freight is, when it will arrive, and what condition it will be arriving in. By increasing the transparency of your carriers, you will be able to provide more accurate updates to your stakeholders and identify pain points. If your cargo is moving 24/7, you deserve 24/7 visibility, not to mention 24/7 assistance. Cargo Signal's Command Center is staffed by logistics professionals who monitor global shipments around the clock, 365 days a year, and are ready to intervene on your behalf when problems arise.

### CARGO SIGNAL CAN HELP YOU

- Spot potential problems in real time, before they become a bigger issue, and help you reroute freight as necessary.
- Keep a closer eye on your carriers and increase their accountability.
- Cut costs by protecting your cargo, alerting you immediately when damage or theft occurs.
